

ABSTRACT OF THE DISCLOSURE

A foam generating apparatus includes a foam generation device for generating initial foam by jetting air into a foaming agent solution and a foam fining device for fining the initial foam to produce the foam for foambathing. A foaming tool provided
5 within a foaming chamber jets air from an opening to the bottom wall of the foaming chamber. The opening is covered with a net having an opening ratio between 27.7% and 49.5% and a number of air-jet openings per unit area between $9690/\text{cm}^2$ and $24800/\text{cm}^2$. From another point of view, the net attached to the opening has
10 a mesh number between 250 mesh and 400 mesh.
